Bhumika Patidar

JAVA DEVELOPER
shanupatidar46@gmail.com | 9340173910 | Pune

PROFESSIONAL SUMMARY

Java Backend Developer Proficient in designing, developing, and maintaining robust backend solutions. Skilled in Java, Spring Boot, RESTful APIs, and database management (MySQL/PostgreSQL). Experienced in implementing scalable and efficient server-side logic, optimizing performance, and ensuring high-quality code through unit testing and best practices. Strong understanding of object-oriented programming, design patterns, and agile methodologies, with the ability to collaborate effectively in cross-functional teams to deliver reliable software solutions on time.

TECHNICAL SKILLS

- **Programming Languages:** Java, SQL
- **Frameworks & Libraries:** Spring Boot, Spring MVC, Spring Data JPA, Hibernate
- **Web Services:** RESTful APIs, SOAP (basic) ,Postman
- **Database Technologies:** MySQL, PostgreSQL
- **Build & Dependency Management:** Maven, Gradle
- **Version Control:** Git, GitHub
- **Testing & Debugging:** JUnit, Mockito, Log4j
- **Development Tools:** IntelliJ IDEA, Eclipse
- **Server & Deployment:** Apache Tomcat, basic AWS knowledge
- **Other Concepts:** OOP, Design Patterns, MVC Architecture, Agile/Scrum methodology

PROJECT

Project: Bank Transaction Management System
Role: Java Backend Developer
Tools & Technologies: Java, Spring Boot, Spring MVC, Hibernate, MySQL, RESTful APIs, Maven, Git, JUnit, Mockito, Apache Tomcat
Project Description:
The Bank Transaction Management System is a backend banking application developed using Java and Spring Boot to manage customer accounts and financial transactions efficiently. The system provides secure and real-time processing for operations such as account creation, balance inquiry, deposits, withdrawals, and fund transfers through RESTful APIs. It follows MVC architecture and object-oriented design principles to ensure scalability and maintainability. Hibernate is used for ORM mapping, while MySQL handles reliable data storage. Exception handling, validation, and logging are implemented to improve system stability, and unit testing with JUnit and Mockito ensures high-quality and error-free functionality.

Key Responsibilities:

- Developed and maintained backend services using Java, Spring Boot, and Hibernate.
- Designed and implemented RESTful APIs for seamless communication between frontend and backend.
- Integrated and managed database operations using MySQL, ensuring data integrity and performance.
- Implemented unit testing using JUnit and Mockito to ensure code quality and reliability.
- Participated in code reviews, debugging, and performance optimization of backend modules.
- Collaborated with cross-functional teams in an Agile/Scrum environment to deliver features on time.
- Maintained version control and project documentation using Git.

EDUCATION

- **B.Tech in computer science** –

  PrashantiInstituteof TechnologyUjjain, 2024

- **M.Tech in Embedded System and Computing**-

  COEP Technological University , Expected Master: 2027
